# Succed Hackathon

University of Alicante

---

April 2014

---

# Who We Are

---

Rafael Carrasco

Antonio Corbi

---

# What Are We Trying To Get?

---

1. Detection of text lines in scanned pages.
  2. Segment them into words and characters.
  3. Align these images with the corresponding ground truth text.
-

# Demo time...

---

1. Not much to see but we have a basic initial tool...*"d-images"*
  2. Technologies employed ...
    - a. Programming language: D (not a pun )...Big companies are employing it (Facebook). It's a joy to play with it.
    - b. Gtk for the User interface (this brought us a *warm* and *unexpected* surprise: web app for free!).
-

# Current GUI tool.
